

**Side Cooling System for Battery** 

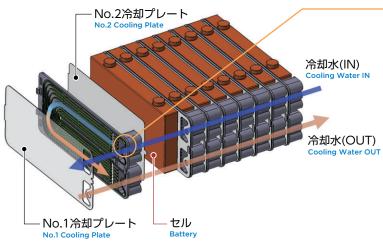

セルにおける膨張収縮の吸収、側面を冷却する機能を集約した 両面冷却システム

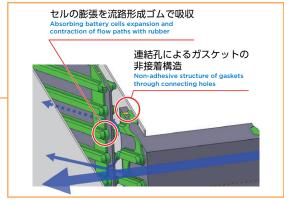

Double-sided cooling system for battery cells that integrates absorbing expansion with gaskets in flow paths and cool off

## 側面冷却システム コンセプト

Concept of side cooling system

スタック構造 Assembly structure

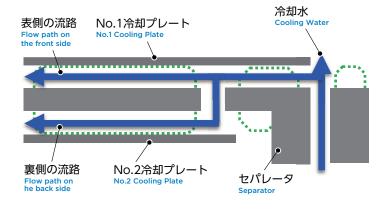

- ■セル追従構造 Follower structure to cell 独自設計によるセルの膨張収縮への対応 Managing expansion and contraction of battery cells through original design
- ■スタックでのシール機能 Sealing through stacking バッテリーのスタック力を使いシール機能を発現 Utilizing the stacking force in the battery to create the sealing function
- ■一体成型 Cool off the side of battery cells 流路・シール形状を同時成型 Achieving side cooling with original design
- ■側面冷却 One-piece molding オリジナル構造で側面冷却を実現 Simultaneously molding flow path and seal section

## 冷却水の流れと流路のセル追従性

Flow of cooling water and Managing expansion and contraction of battery cells

## 冷却水の流れ

Flow of Cooling water

## 流路のセル追従性

Flow path cell following
